

States with recreational marijuana have lower rates of e-cigarette/vaping associated lung injury (EVALI)

Average case rate by state marijuana policy

Note: * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$. We consider a state to be a recreational marijuana state if it had at least one rec dispensary open in January 2019. Results are robust to considering any state with a rec marijuana law as of 2019 to be a rec state. Bars in top panel reflect range of EVALI cases per million. Brackets in the bottom panel display 95% confidence interval of each group mean.
